Pole Trailer and Light Bar

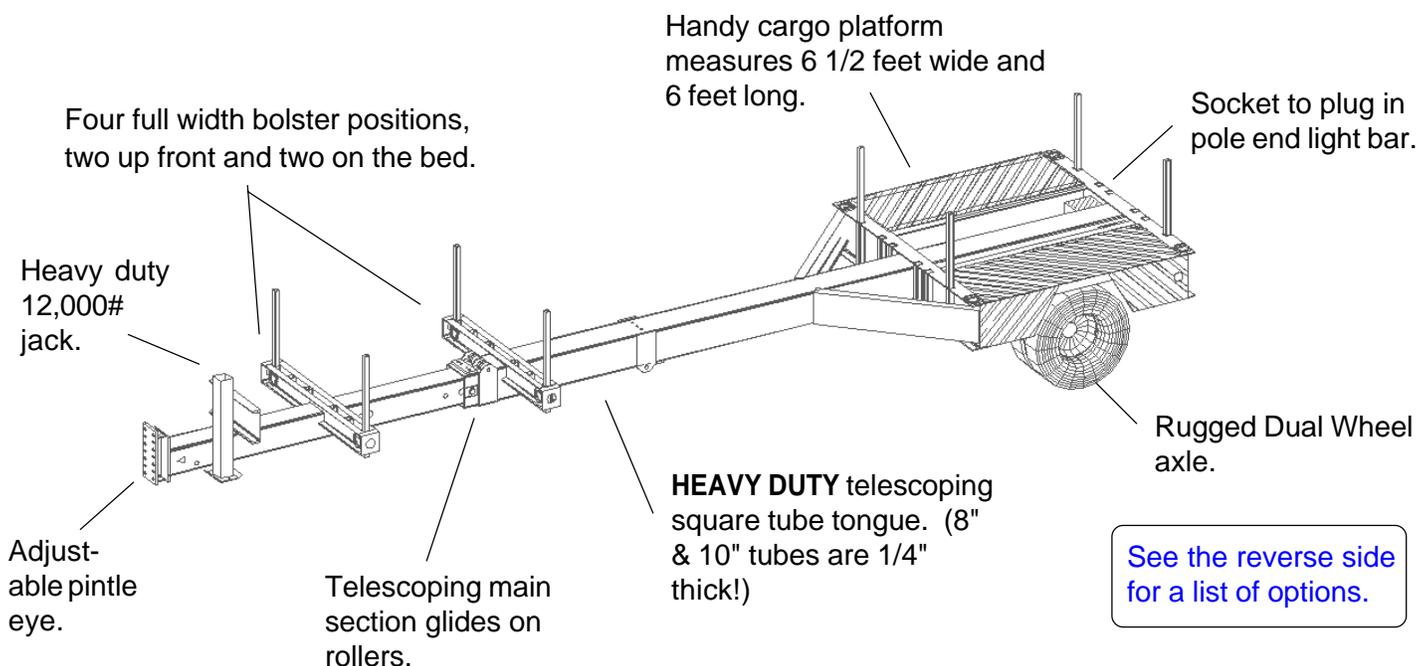

CZ Engineering, Inc. manufactures three models of Pole Trailers. The CZ10KP (10,000 lbs. payload), the CZ12KP (12,000 lbs. payload) and the CZ15KP (15,000 lbs. payload).

These trailers are designed with the safety and convenience of the operator in mind! Take a look at our feature-packed design:

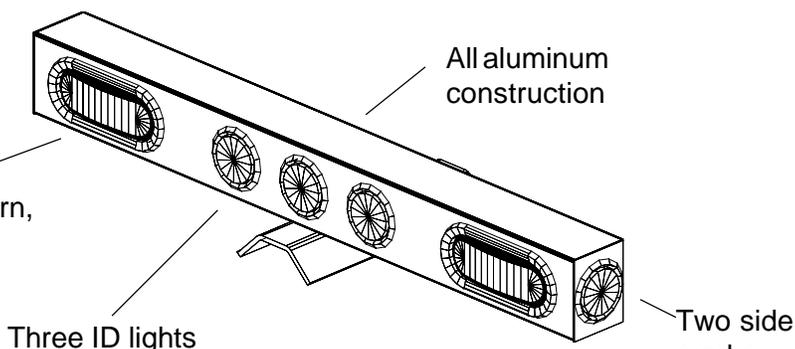

A massive dual wheel axle reduces axle, brake and tire problems!

Safety, trouble free operation and long life!

The optional **Pole End Light Bar** will further enhance the ease and safety of transporting long loads. It easily attaches to the end of the pole you are transporting and plugs into the trailer, giving you tail lights, side lights, brake and turn signals.

The light bar assembly weighs a mere 14.5 lbs. and fastens securely to the pole with a fast acting nylon winch strap.

All lights are rubber mounted, sealed beam type.
