

Cross-arm Carrier

From the builders of the World's Safest Pole Trailers.

Longitudinal Accommodation

This configuration depicts a trailer with a 3 foot longer Receiver tube and a standard Extended Storage area. That allows room for the 10' cross-arms, shown.

A cross-arm carrier will also fit a standard length trailer if it doesn't include the extended storage area.

Options on this trailer:

- 3' V-Storage Area
- Raised Bolsters
- Winches & Straps
- Additional 3' on the Receiver tube
- Cross-arm Carrier

Special Features

- Simple design that does not interfere with carrying poles.
- Room for 16 3 1/2" x 4 1/2" cross-arms, 8 on each side of the trailer.
- Cross-arms are accessible while the trailer is fully loaded with poles.
- Only 1 inch of ground clearance is lost.
